

Perfect Lightning

*"In The Right Light, At The Right Time,
Everything Is Extraordinary"*

Aaron Rose

Event music sees as its natural complement an adequate lighting system which may relate to the dining hall, the dance floor but also the interior and exterior architecture of the location, and create the right atmosphere according to the different moments.

As for the music, the lighting is a dynamic concept which must accompany each step of the party, including those that begin with sunlight, cross the nightfall and ends at deep night. Everybody will be immersed in the romantic atmosphere of a red-orange sunset over the lake, dress the dinner room with the dress of a fine New York restaurant, paint the front of the villa with the colors chosen for the event or making irresistible energy of the final party, involving all the guests at the dance.

Event lighting is one of the most important mediums to bring the atmosphere to life. Special concepts of lighting can be used to transform any empty space into an elegant and visually appealing room. Lighting can be used for practically anything. Some of the most common ways to use lighting would be for center pieces, buffets, floral arrangements, walls, stages, dance-floors, etc. Lighting in an event determines how your guests see the room, and it improves and enhances the overall appearance of the ambiance. It can transform any empty space from an uninspired, lusterless room, into a magical wonderland.

All images and videos represent our equipment, highly professional, low-energy, installed and managed by our event specialists.
